THE HISTORY OF WIND POWER

V.Ryan © 2009 World Association of Technology Teachers

1. Where would the wind mill seen opposite have been located in the 1800s?

2. What would it have been used to produce?

3. Add colour / shade to the drawing so that it looks as realistic as possible.

4. The in complete drawing of a Hallaway wind mill is seen opposite. It was used in the USA until the 1940s. It pumped water to the surface and was commonly seen on remote farms.

Complete the drawing by adding the blades, colour and shade.

5. What natural material was used to manufacture the frame, which held up the blades?

6. Why do you think it was used on remote farms?
